

TRINITY RIVER VISION PROJECT MAKES GREAT PROGRESS IN 2014

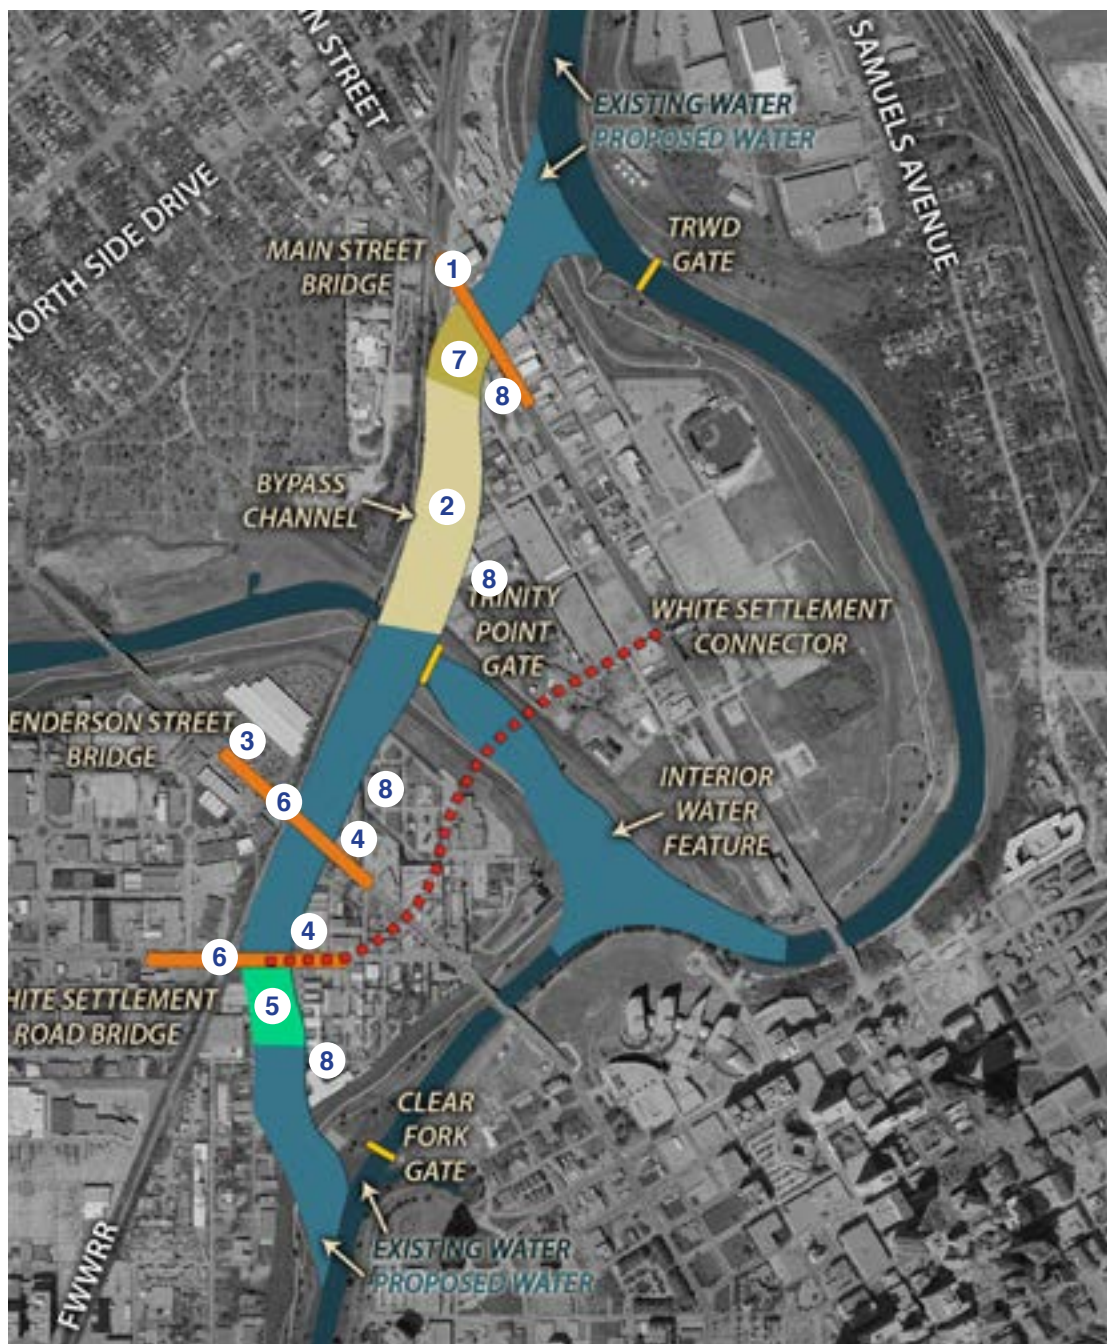

The Trinity River Vision project partners continue to move this project forward. Construction of bridges, environmental work, utility relocations and demolition work has continued and now you see dirt moving. The central city project demonstrates a smart way to provide needed flood protection, infrastructure improvements and environmental remediation that will not only benefit the project area but our entire city. Continued outreach efforts targeting North Texas vendors, ensures they enhance their awareness of the

project but also have the best opportunity to bid on upcoming projects. TRV partners are committed to keeping project dollars pumping through the local economy. To date, the project has contracted a total of \$79,176,462 with 39% percent of those dollars contracted to D/M/WBEs

To get a general idea of where all of this work has been taking place, take a look at the map below.

CONTRACTING UPDATE

First Quarter 2015

- ① Construction of the Main St. bridge has started and the expected completion time is in *2018.
- ② Environmental remediation work happening along the location where the USACE will construct the proposed bypass channel.
- ③ Henderson St. detour construction was complete in November 2014 to allow for the bridge construction to begin.

Risk Analysis
November 11-13, 2015
(3-Day Course) (PMA Course) Earn: 24 PDU/CEU**

Contractor Spotlight

EFFECTIVE ENVIRONMENTAL, INC.

Effective Environmental was contracted by the Trinity River Vision Authority (TRVA), in August of 2014, to perform the environmental remediation services related to the Area 1 Response Action Plan Implementation. Area 1 is made up of 5 adjacent properties that occupy 23 acres located in the Northern section of the future Bypass Channel. The properties were formerly occupied by multiple companies including a large metal recycling operation, and a railroad spur, all with their own environmental issues requiring remedial actions. TRVA is required by the United States Army Corps of Engineers to meet the real estate needs for the future Federal Floodway and provide clean property.

"Based on technical capabilities and competitive pricing, Effective Environmental, Inc. (E2) won a contract for implementation of response action plan of Area 1 sites on September 22, 2014. The project includes excavation and disposal of about 50,000 tons of contaminated soil; removal of about 850,000 gallons of groundwater; breaking and disposal of about 18,000 tons of concrete and asphalt and restore site by backfilling and hydro-mulching. E2 is committed to

perform this project safely, on-time, and within budget. E2 is confident that we will successfully complete this remediation project by exceeding TRVA expectations".

– Hiren Shah, Project Manager for Effective Environmental, Inc.

Effective Environmental is a Full Service Environmental Company with Dedicated Employees and the equipment to handle every job. From one drum pickups, to multi-million dollar Remediation and Disaster Relief Projects. Effective Environmental's remediation professionals provide the technical capabilities and operational expertise to manage both small and large scale environmental projects. Their multidisciplinary technical and operations staff provides results-oriented systems and programs, incorporating both off-site removal and on-site treatment, as needed.
